1 Overview

The wpa_supplicant is required for the NRC7394 STA operation. As the wpa_supplicant does not natively support S1G (Sub-1 GHz) channels, an internal channel mapping table is used within the firmware to uniquely associate each S1G channel to its pre-determined channel in the traditional 2.4/5GHz band.

As the set of available S1G channels is region-specific, a separate wpa_supplicant configuration file is used to handle the usage for each supported region.

The rest of the document will present the channel mapping table for each supported region and explain how to modify the configuration file.

2 Channel

2.1 US (United States) Channel

Table 2.1 presents the US channels for S1G operating class 1, 2, and 3, along with their indices.
